Angelus Shotblast CMU

Shotblast units provide a roughened, weathered appearance with some aggregate exposure. Precision cmu are processed through a machine that propels shot media against each unit to create the texture.

Aggregate exposure is very random, as the amount and type of aggregate that rests close to the surface will vary greatly from unit to unit.

The outcome is a unique blend of units providing the character and human scale of masonry.

Please note the depth of the texture will vary from unit to unit. The force of the blasting is relatively static, whereas the surface hardness of each unit varies slightly enough for variation in the degree of the blast effect. We recommend a heavy blast for best results.

Most precision units may be shot blast, including open end and bond beam configurations, as well as double open ends. This allows for freedom in design, structurally and aesthetically.

The shotblast texture is available on special order. Please consult with your Angelus Block representative for specific information.

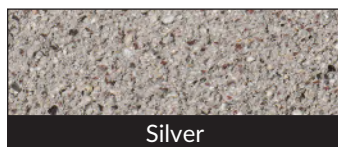

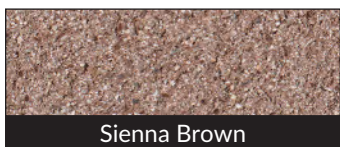

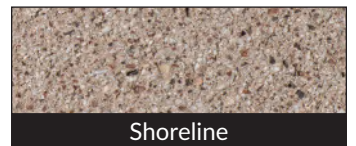

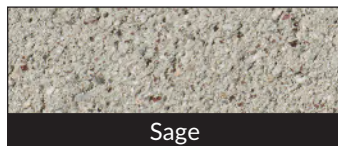

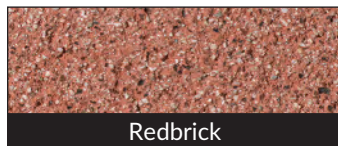

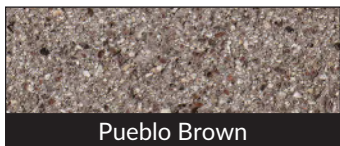

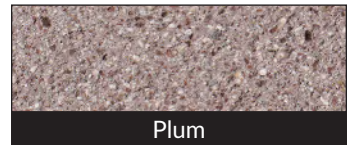

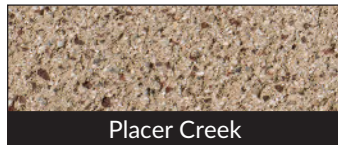

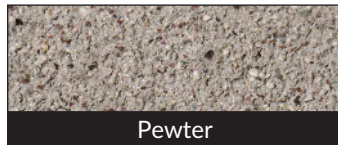

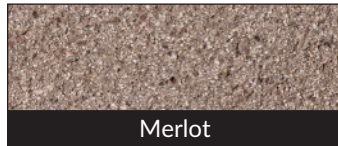

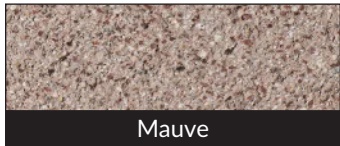

Angelus Shotblast CMU Colors

Stock Colors (Shotblast texture is special order)

Special Order Colors

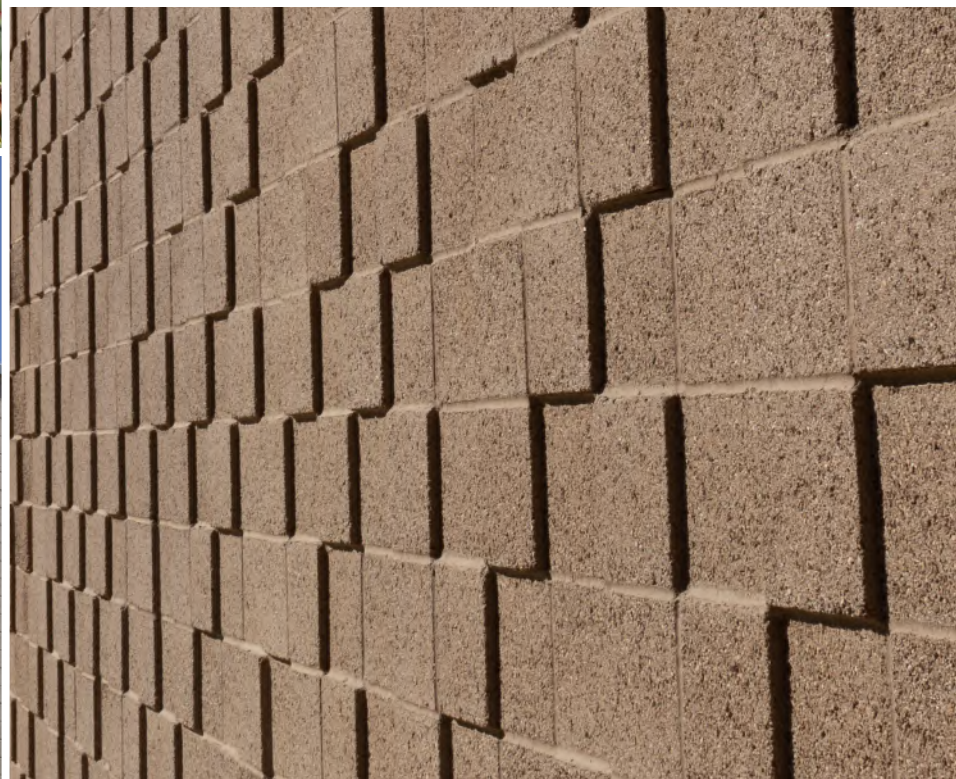

All color images are intended to be representative only. Colors as shown are subject to media variation in reproduction. Variation in color, shades of color, texture, and aggregate exposure is inherent in all concrete products and exact matches cannot be guaranteed. A color may not be available from all locations. Availability of colors or textures as "stock" or "special order" is subject to change without notice.

Angelus Block recommends final color selections based on physical samples.

We have many other tools available to facilitate designing with color and texture, including digital hi-res swatches, and images for modeling.

Please contact your Angelus representative for assistance, samples, and design tools.
